BRANDEN FARMER

BUSINESS INTELLIGENCE | DATA ENGINEERING | OPERATIONAL ANALYTICS

Fernley, NV | (775) 636-3905 | branden_farmer@live.com

PROFESSIONAL SUMMARY

Business intelligence, data engineering, and application developer with 10+ years of experience across analytics, production planning, and manufacturing. Production experience maintaining data models and pipelines with dbt, AWS, PostgreSQL, and Amazon Redshift. Develops data products for a major utility client using Palantir Foundry, Python, PySpark, TypeScript, React, and Power BI to connect large-scale data with operational decisions.

PROFESSIONAL EXPERIENCE

GUIDEHOUSE

Product Developer Oct 2026 - Present

- Develop data products and operational applications for a major utility client, connecting large-scale datasets with business workflows and decision-making in Palantir Foundry.
- Build and maintain Palantir Foundry data pipelines using Python and PySpark to transform and integrate large volumes of data for analytics and downstream products.
- Design ontologies and develop TypeScript logic, custom React applications, and widgets in Foundry to deliver intuitive, data-driven tools for business users.
- Create Power BI dashboards that turn complex utility data into clear operational insights and support the client's data and product needs.

SIERRA NEVADA CORPORATION | Sparks, NV

Business Intelligence Developer III May 2022 - Sep 2026

- Designed and delivered enterprise BI, analytics, and operational applications using Power BI, Palantir Foundry, SQL, Python, and PySpark, improving decision-making efficiency by 10% and generating approximately $30,000 in annual savings.
- Built and maintained Power BI dashboards, custom Power BI visuals, semantic models, DAX measures, Power Query transformations, and KPI reporting that translate complex operational data into actionable insights.
- Built Palantir Foundry operational applications using Workshop, Ontology, Actions, and function-backed workflows for planning, KPI tracking, data-quality exceptions, workflow management, and decision traceability.
- Engineered automated ETL/ELT and data-integration workflows across SQL Server, PostgreSQL/AWS RDS, SharePoint, and REST/Graph/GraphQL APIs with validation, logging, exception handling, and data-quality controls.
- Maintained production dbt data models and pipelines on AWS using PostgreSQL and Amazon Redshift to support reporting and analytics.
- Developed and implemented 10+ Power Apps and Power Automate solutions, reducing manual workload by 25% while improving workflow visibility, standardization, and accountability.
- Developed SharePoint Online solutions, including SharePoint Framework (SPFx) web parts, and custom Power Apps Component Framework (PCF) controls using TypeScript and JavaScript.
- Authored and optimized advanced SQL queries, views, stored procedures, and data models for reporting, data warehousing, application backends, and ad hoc analysis.
- Built Python automations for data manipulation, reconciliation, cost analysis, scheduled processing, RPA, and automated report generation.
- Performed cost analysis and data-quality validation using Python and SQL, identifying process improvements and supporting more reliable resource allocation.
- Partnered with business leaders, IT, cybersecurity, and platform teams to gather requirements, map processes, define KPIs, document solutions, and deliver governed analytics in enterprise environments.

Planning Supervisor Oct 2021 - May 2022

- Led a team of production planners and managed schedules, material constraints, capacity, and KPIs to support on-time delivery.
- Applied SQL, Power BI, Excel, and business process mapping to improve forecasting and planning accuracy, reducing lead times by 20%.
- Created Python and SQL automation tools and used proactive shortage analytics to avoid an estimated $20,000 in expediting fees.

Production Planner Jan 2019 - Oct 2021

- Developed and maintained production schedules that achieved 95% on-time delivery and improved overall production efficiency by 10%.
- Created Power BI dashboards, SQL analyses, and Excel/VBA applications that automated reporting and improved visibility into schedule, material, and operational performance.
- Queried the enterprise data warehouse and translated supply, demand, material, and schedule data into timely planning decisions.

Lead Production Technician Jan 2018 - Jan 2019

- Led and trained technicians while building Excel VBA, SQL, and Microsoft Access tools for material tracking and production reporting; training improved team skills and performance by 25%.

Production Technician Aug 2016 - Jan 2018

- Built Excel VBA reports, macros, and Access-based data tools to improve quality and production tracking while assembling and testing products to technical standards.

SERVER TECHNOLOGY | Reno, NV

Assembly Technician Jan 2014 - Aug 2016

- Automated Excel reporting for production tracking, improved data accuracy, and provided management with timely operational metrics while assembling server power distribution units.

TECHNICAL SKILLS

Business Intelligence: Power Platform (Power BI, Power Apps, Power Automate), custom Power BI visuals, DAX, Power Query (M), semantic models, dashboards, KPI reporting, executive reporting, data visualization, self-service BI, operational analytics, forecasting, cost analysis

Data Engineering & Databases: SQL, dbt, SQL Server, PostgreSQL, AWS (Amazon Redshift, RDS), PySpark, ETL/ELT, data pipelines, data warehousing, data modeling, schema design, stored procedures, views, query optimization, data integration, data quality, reconciliation

Development & Automation: Python, TypeScript, JavaScript, C# and .NET, Rust, React, Node.js, Power Apps Component Framework (PCF), SharePoint Framework (SPFx), Advanced Excel/VBA, RPA, REST APIs, Microsoft Graph API, GraphQL, JSON, HTML/CSS

Platforms & Delivery: Palantir Foundry (data pipelines, ontology design, Workshop, Actions, AIP, custom React apps and widgets), SharePoint Online development, Microsoft 365, Azure Functions, Azure SQL, API Management, Key Vault, Application Insights, Git/GitHub, CI/CD

Business Capabilities: business planning, production planning, capacity and material planning, supply/demand analysis, KPI definition, requirements gathering, stakeholder management, process improvement, workflow design, UAT, Lean Six Sigma, team leadership

SELECTED TECHNICAL PROJECTS

- **Enterprise data integration:** Designed Python and API-based ingestion patterns across SharePoint, SQL Server, PostgreSQL/AWS RDS, REST/GraphQL, and Microsoft Graph with deduplication, validation, retries, logging, and scheduled execution.
- **Palantir Foundry operational applications:** Designed ontology-driven Workshop applications and function-backed Actions for planning, assignment, data-quality exceptions, KPI tracking, decision traceability, and AI/LLM-assisted analysis.
- **Secure application and analytics architecture:** Contributed to designs using Entra ID and OAuth, Azure Functions, API Management, Azure SQL, Key Vault, Application Insights, GitHub, and CI/CD controls.

EDUCATION

Western Governors University (WGU) | Bachelor of Science in Computer Science | Completed

IBM Full Stack Application Development MicroBachelors Program Certificate | edX / IBM | Dec 2025

High School Diploma, General Education | Sacramento Academic and Vocational Academy | Jun 2009

TRAINING AND CERTIFICATIONS

Palantir American Tech Fellowship | Palantir Technologies | Mar 2026
8-week intensive Foundry & AIP training

Supervisory Management Certificate | UNR Extended Studies | Jan 2021

Lean Six Sigma Green Belt | UNR Extended Studies | Jan 2019

Lean Manufacturing 101 Certificate | UNR Extended Studies | Jan 2017

AWARDS AND RECOGNITION

- 2018 STAR Award recipient for innovation and efficiency in business processes.
- Three-time DTU Award finalist (2021, 2022, and 2023) for technical expertise and leadership.
